AMS 3 formula sheet

All formula with an asterisk must be known by heart. All others are optional and will be given to you in exams if required.

1 Lines

The equation of a line with slope m and y-intercept b is

$$y = f(x) = mx + b \tag{*}$$

If the line goes through 2 points A and B with coordinates (x_A, y_A) and (x_B, y_B) then

$$m = \frac{y_B - y_A}{x_B - x_A} \tag{*}$$

2 Quadratic equations

$$y = f(x) = ax^2 + bx + c$$
 (*)

The graph of y = f(x) is a parabola. It has a minimum (i.e. parabola opens upwards) if a > 0. It has a maximum (i.e. parabola opens downwards) if a < 0. The minimum/maximum is at the location x_V with

$$x_V = -\frac{b}{2a} \tag{*}$$

It has roots (i.e it intersects the x-axis) when y = f(x) = 0. The solutions to this equation depends on the value of D:

$$D = b^2 - 4ac \qquad (*)$$

- if D < 0 there are no solutions. The parabola does not intercept the x-axis. The function $f(x) = ax^2 + bx + c$ cannot be factored.
- if D=0 there is one solution. The parabola just touches the x-axis at the point

$$x_1 = x_V = -\frac{b}{2a} (*)$$

The function $f(x) = ax^2 + bx + c$ is factored as

$$f(x) = a(x - x_1)^2 (*)$$

• if D > 0 there are two solutions. The parabola intercepts the x-axis in the two points

$$x_1 = \frac{-b - \sqrt{D}}{2a} , x_2 = \frac{-b + \sqrt{D}}{2a}$$
 (*)

The function $f(x) = ax^2 + bx + c$ is factored as

$$f(x) = a(x - x_1)(x - x_2) \tag{*}$$

Polynomial functions $\mathbf{3}$

$$y = f(x) = a_0 + a_1 x + a_2 x^2 + \dots + a_n x^n \tag{*}$$

 a_n is the leading coefficient, n is the order of the polynomial.

The factored form of f is

$$f(x) = a_n(x - x_1)(x - x_2)(x - x_3)\dots(x - x_m)q(x) \tag{*}$$

where x_i are all possible solutions to f(x) = 0 and q(x) is a polynomial of order n - m, leading coefficient 1, with no roots $(q(x) \neq 0)$.

Rational functions $\mathbf{4}$

$$y = f(x) = \frac{p(x)}{q(x)} \tag{*}$$

where p(x) and q(x) are polynomial functions.

The roots of p(x) are the roots of f(x). The roots of q(x) are the asymptotes of f(x).

Power functions 5

$$y = f(x) = x^a \tag{*}$$

Properties:

$$x^{a+b} = x^a x^b \tag{14}$$

$$x^{-a} = \frac{1}{x^a} \qquad (*) \qquad (14)$$

$$x^{-a} = \frac{1}{x^a} \qquad (*) \qquad (15)$$

$$x^{a-b} = \frac{x^a}{x^b} \qquad (*) \qquad (16)$$

$$x^{ab} = (x^a)^b = (x^b)^a \qquad (*) \qquad (17)$$

$$x^{a-b} = \frac{x^a}{x^b} \tag{*}$$

$$x^{ab} = (x^a)^b = (x^b)^a (*)$$

Exponential functions 6

Exponential in base a:

$$y = f(x) = a^x \text{ with } a > 0 \tag{*}$$

Natural exponential (exponential in base e with e = 2.71828...):

$$y = f(x) = e^x = \exp(x) \tag{19}$$

Properties of all exponential functions:

$$a^{x+z} = a^x a^z \tag{*}$$

$$a^{-x} = \frac{1}{a^x} \tag{*}$$

$$a^{x-z} = \frac{a^x}{a^z} \tag{*}$$

$$a^{xz} = (a^x)^z = (a^z)^x \tag{*}$$

Logarithmic functions

Logarithm in base a is the inverse of the exponential in base a:

$$y = \log_a(x)$$
 is equivalent to $x = a^y$ (*)

Natural logarithm (logarithm in base e) is the inverse of the natural logarithm:

$$y = \log_e(x) = \ln(x)$$
 is equivalent to $x = e^y$ (*)

Inverse relations:

$$\log_a(a^x) = x \tag{*}$$

$$a^{\log_a(x)} = x \tag{*}$$

$$\log_a(a^x) = x$$
 (*) (26)
 $a^{\log_a(x)} = x$ (*) (27)
 $\ln(e^x) = x$ (*) (28)
 $e^{\ln(x)} = x$ (*) (29)

$$e^{\ln(x)} = x \tag{*}$$

Properties of all logarithmic functions (where a is a positive constant).

$$\log_a(xy) = \log_a(x) + \log_a(y) \tag{*}$$

$$\log_a \left(\frac{1}{x}\right) = -\log_a(x) \qquad (*)$$

$$\log_a \left(\frac{x}{y}\right) = \log_a(x) - \log_a(y) \qquad (*)$$
(31)

$$\log_a\left(\frac{x}{y}\right) = \log_a(x) - \log_a(y) \tag{*}$$

$$\log_a(x^c) = c\log_a(x) \tag{*}$$

Relations for changing bases:

• From an exponential function in base a to the natural exponential:

$$a^x = e^{x \ln a} \tag{*}$$

 \bullet From a logarithmic function in base a to the natural logarithm:

$$\log_a(x) = \frac{\ln x}{\ln a} \tag{*}$$

Trigonometric functions 8

The basic trigonometric functions are:

$$y = f(x) = \sin(x) \tag{36}$$

$$y = f(x) = \cos(x) \tag{*}$$

$$y = f(x) = \tan(x) = \frac{\sin(x)}{\cos(x)} \tag{*}$$

Table of values you have you know (*):

Angle (degree)	Angle (radian)	\sin	cos	tan
0	0	0	1	0
30	$\pi/6$	0.5	$\sqrt{3}/2$	$1/\sqrt{3}$
45	$\pi/4$	$\sqrt{2}/2$	$\sqrt{2}/2$	1
60	$\pi/3$	$\sqrt{3}/2$	0.5	$\sqrt{3}$
90	$\pi/2$	1	0	not defined

Properties:

$$\cos^2 x + \sin^2 x = 1 \tag{*}$$

$$\sin(2x) = 2\sin x \cos x \tag{40}$$

$$\cos(2x) = \cos^2 x - \sin^2 x \tag{41}$$

$$\tan(2x) = \frac{2\tan x}{1 - \tan^2 x} \tag{42}$$

Other addition/multiplication formula

$$\cos(a+b) = \cos a \cos b - \sin a \sin b \tag{43}$$

$$\cos(a-b) = \cos a \cos b + \sin a \sin b \tag{44}$$

$$\sin(a+b) = \sin a \cos b + \cos a \sin b \tag{45}$$

$$\sin(a-b) = \sin a \cos b - \cos a \sin b \tag{46}$$

$$\tan(a+b) = \frac{\tan a + \tan b}{1 - \tan a \tan b} \tag{47}$$

$$\tan(a+b) = \frac{\tan a + \tan b}{1 - \tan a \tan b}$$

$$\tan(a-b) = \frac{\tan a - \tan b}{1 + \tan a \tan b}$$

$$(47)$$
